Fit score:

10/10

Risk flags:

none

1) Application (100 words)

Hi Blackbird Lab team — I'm applying for the Junior Frontend Engineer role. I build production-ready React/TypeScript frontend features with clean component structure, predictable state, and careful API/data-contract integration. My main proof is CatIntAssist (<https://github.com/gatrivi/catintassist>), where I focus on reliability and fast iteration in real workflows (bilingual/medical domain). I work well with product, design, and backend teammates, and I'm comfortable debugging UI edge cases and shipping improvements quickly. I speak English fluently and Spanish native. Thanks for your time.

2) Application (50 words)

Hi Blackbird Lab team — I'm applying for the Junior Frontend Engineer role. I build production-ready React/TypeScript UI with dependable state handling and careful API integration. My main proof is CatIntAssist, a reliability-focused React app used in real bilingual/medical workflows. English fluent.

<https://github.com/gatrivi/catintassist>

7) Technical talking point (interview)

In my React projects, I keep UI state predictable by separating “data/API state” from “presentation state,” making API failures visible but non-blocking, and designing typed boundaries to prevent regressions as features evolve.

8) Recruiter DM (copy/paste)

Hi — I’m Gastón Alejandro Trivi. I’m applying for the Junior Frontend Engineer role. My relevant proof is CatIntAssist (React/TypeScript, reliability-first). If helpful, I can share short examples of UI state handling + API integration patterns I used there. Thanks.

9) Follow-up message (copy/paste)

Hi Blackbird Lab team — following up on my application for Junior Frontend Engineer. I’m still very interested. If you’d like, I can add a short note with the most relevant UI/API integration details from CatIntAssist. Thanks.

10) Interview prep talking point

Defend one feature from your proof project end-to-end: what the UI needed, what the API/data contract was, how you modeled state, what failures you handled, and what you improved after feedback.

11) Claim-safety check notes

No fabricated years of experience; language avoids seniority titles you don’t own.

No marketing/hype phrases that sound AI-generated.

Uses only your proof projects as evidence.

Uses gatrivi@gmail.com (not the forbidden domain).
